**Electricity Use in Namibia** Oct 25 2022 By 2007, electricity demand in Namibia, Southern Africa, outstripped the supply capacity in the region. Namibia relies on other sources to provide 53 percent of its local electricity needs. This disparity necessitated either the introduction of new generation capacity or load management to supply the shortfall in electricity demand, with a subsequent rise in electricity costs. In *Electricity Use in Namibia*, author Dr. Godwin Norensé Osarumwense Asemota explores load management methodologies vital to the effective, efficient, and successful operation of any power utility—in order to reduce electricity demand peaks, lower utility production cost, reduce consumer cost, match consumer loads with supply constraints, and improve availability. Asemota provides the background of the study, discusses the historical perspective of Namibian Utility, presents a literature review, details the research methodology, shares the results of the questionnaire through figures and tables, provides thorough analyses, and offers a conclusion and recommendations. *Electricity Use in Namibia* communicates the steps necessary to strengthen Namibia's electricity backbone in order to facilitate a stable future for the country.

**Modeling the Economics of Greenhouse Gas Mitigation** Jan 22 2020 Models are fundamental for estimating the possible costs and effectiveness of different policies for reducing greenhouse gas (GHG) emissions. There is a wide array of models to perform such analysis, differing in the level of technological detail, treatment of technological progress, spatial and sector details, and representation of the interaction of the energy sector to the overall economy and environment. These differences impact model results, including cost estimates. More fundamentally, these models differ as to how they represent fundamental processes that have a large impact on policy analysis--such as how different models represent technological learning and cost reductions that come through increasing production volumes, or how different models represent baseline conditions. Reliable estimates of the costs and potential impacts on the United States economy of various emissions reduction and other mitigation strategies are critical to the development of the federal climate change research and development portfolio. At the request of the U.S. Department of Energy (DOE), the National Academies organized a workshop, summarized in this volume, to consider some of these types of modeling issues.

**What Factors Influence Consumers' Decisions to Purchase Energy Star Appliances?** Aug 30 2020 This paper examines how differences in operating costs and market availability affect ownership of Energy Star dishwashers and clothes washers. I use logistic regressions and data from the 2009 Residential Energy Consumption Survey and the EPA's Energy Star program to quantify these effects.

Results indicate that controlling for temporal changes is very important; after doing so I find that differences in availability of efficient appliances do not affect ownership patterns. Overall, the frequency of appliance use does not increase the household's responsiveness to electricity prices, which suggests that consumers do not fully value efficiency when choosing among appliances.

**Cool Appliances** Apr 30 2023 In IEA Member countries, electrical appliances are the fastest growing energy users, after automobiles. Cost-effective technology exists that could improve the energy efficiency of appliances by more than one-third in ten years. Through application of such technology, the greenhouse gases emitted as a result of the use of appliances in IEA Member countries alone could be slashed by the equivalent of 322 million tonnes of CO<sub>2</sub> per year by 2010. This book assesses the potential energy savings and carbon reductions to be achieved through technical improvements to appliances. It analyses the policy options available to stimulate greater manufacture and use of more efficient appliances. It suggests ways to strengthen existing appliance-efficiency programmes, and it demonstrates how international collaboration can enhance those programmes (IEA Website)

Sustainable Remediation of Contaminated Sites Oct 01 2020 This book presents a holistic approach to remediation that considers ancillary environmental impacts and aims to optimize net effects to the environment. It addresses a broad range of environmental, social, and economic impacts during all remediation phases, and achieves remedial goals through more efficient, sustainable strategies that conserve resources and protect air, water, and soil quality through reduced emissions and other waste burdens. Inside, the authors simultaneously encourage the reuse of remediated land and enhanced long-term financial returns for investments. Though the potential benefits are enormous, many environmental professionals and project stakeholders do not utilize green and sustainable technologies because they are unaware of methods for selection and implementation. This book describes the decision framework, presents qualitative and quantitative assessment tools, including multi-disciplinary metrics, to assess sustainability, and reviews potential new technologies.

Sustainable Retail Refrigeration Mar 30 2023 Carbon emissions from the retail segment of the food cold chain are relatively high compared to other parts of the food cold chain. Studies have also shown that food temperature is less well controlled at the retail and consumer end of the cold chain. There is therefore considerable potential to optimize performance of refrigerated display cabinets and the refrigeration systems that are used to operate them to reduce carbon emissions and to improve food temperature control. Sustainable Retail Refrigeration draws together world experts on retail refrigeration. In a single resource, the authors cover the latest technologies and best current knowledge in the field. With increasing concerns about energy use and global warming gasses, retailers are increasingly being called to

account for their actions. Sustainable Retail Refrigeration is a valuable reference to manufacturers, managers and policy makers, incorporating both a design and an operational perspective.

**Revivify Your Home** Apr 26 2020 Everyone deserves a better life through a better home. Improving your home can upgrade your life. Are you thinking about remodeling, renovating, adding-on or building your home? "Revivify Your Home" will change how you approach your project. Author Grace Mase, founder and CEO of BEYREP, is like a fairy godmother for home improvements. She will provide you peace of mind by helping you take control of your home improvement project and avoid the costly heartaches. Like tidying up with Marie Kondo's KonMari Method, Grace will show you a simple and strategic framework to guide you through the journey to successfully achieve your home improvement goals. When starting a major home improvement project, many homeowners would cold-call contractors or glorified handymen to gut and remodel their house without an architectural plan. It is like asking urgent care to perform delicate heart surgery without an attending heart surgeon's guidance. Fortunately, no reputable urgent care facility would take such a request, but not all contractors and handymen share the same ethical standards. This approach is a huge gamble. Perhaps it is not surprising that homeowner frustration with home improvement projects has consistently ranked as one of the top consumer complaints nationwide for over twenty years, according to the National Association of Consumer Agency Administrators and the Consumer Federation of America. Grace has heard many horror stories of home improvement projects gone wrong and transformed several potential disasters into successful projects. With architecture degrees from UC Berkeley and Yale University and experience as a former UC Berkeley Campus Architect, she has numerous successful renovation projects under her professional belt. Many homeowners stumble through their home improvement project because they are not prepared and don't know what to expect. They don't enjoy it and feel like they are on an emotional rollercoaster. Most of them don't realize that renovating or remodeling their home is a significant emotional as well as a financial investment and rush in unprepared for such a significant undertaking. Others want to improve their home, but never take the first step because of their fear of being taken advantage of, or fear of the unknown. Grace will guide you through the process of planning strategically, preparing mentally and emotionally, and making smart decisions that save time and save money. Drawn from her experience on thousands of projects, Grace shares her proven process that resulted in the creation of her patented BEYREP personalized online home improvement tool. Each chapter contains key insights, best practices, and strategies to help you through the process and bring order to chaos, ensuring your home improvement will be a rewarding experience that you'll enjoy for a lifetime. "Revivify Your Home: Take Control of Your Home Improvement With Peace of Mind and Level Up

Your Life" will help you upgrade your life by empowering you to improve your home with confidence and peace of mind.
