Restorative Gap Management in the Esthetic Zone Jul 07 2021 Today, adhesive techniques for partial crowns and bridges have become routine protocol, complementing established treatment options for fixed prosthodontics. Minimally invasive or noninvasive treatment options such as direct bonding with composite, veneers or resin-bonded bridges greatly help to reduce esthetic, technical, and biologic complications and increase the potential for reintervention. Therefore, these alternatives to anterior implants have gained increasing importance. Consequently, this book covers a wide spectrum of therapeutic means to deal with gaps in the anterior region. The

content is divided into the following sub-themes: moving (the orthodontic approach), bonding (the restorative, noninvasive approach), placing pontics (the reconstructive approach with bonded or full-crown bridges), and placing implants (the implantologic approach).

Veneers Nov 30 2020 Veneers is not a book to impress, but a book to teach, wherein the author's deep knowledge of the

*foundations of dentistry is revealed. The need to carry out adequate diagnoses that consider functional aspects fundamental to achieving success in this compromised type of treatment is emphasized. The book answers a number of questions: Is veneering a challenge? What do you need to have a predictable key to success in your workshop? And - What did I have to learn and remember well, after an era of uncertainty, trials, and material choices, to treat this therapy as an ordinary but demanding clinical procedure? Through detailed clinical cases, this book shows when veneers are indicated, when to avoid them, what risks lie in wait, how to prepare the teeth, what type of materials to use, and how to proceed with cementation. It also shows where this type of treatment is going in the future, with the incorporation of the digital workflow. This book is a must for clinicians dedicated to esthetic restorative dentistry.*
